

**REMARKS**

The present amendment is responsive to the Notice to File Corrected Application Papers dated June 18, 2008. This Notice pointed out that in applicant's amendment of Aug. 20, 2002, the specification had been amended to renumber Figs. 13A-13B as Figs. 13A-13H, but that no correspondingly corrected drawings were filed. The Notice also pointed out that the drawings in the international publication only labeled these drawings 13A and 13B.

In order to correct this informality, the present amendment amends the specification to refer to the figure numbers that are presently on the figures and were on the same figures in the international publication. The labeling of the pages with figures 13A and 13B had never been objected to and so it need not be changed. The description of these figures, as in the present amendment, now more clearly indicates which sequences are being referred to and use the same figure numbering as was used on the figures as filed.

Accordingly, the informality noted in the Notice has been corrected by amending the description of the drawings in the specification, rather than by amending the drawings. The noted informality has thus been corrected and the application should now be in condition for issue. Acceptance of this amendment as being fully responsive to the Notice of June 18, 2008, and prompt issuance of the

Appln. No. 10/070,255  
Amd. dated July 23, 2008  
Amendment under 37 C.F.R. §1.312

patent on the present application are therefore earnestly  
solicited.

Respectfully submitted,
